

215.1022.01

SPECIFICATION

Please amend the paragraph at page 20, lines 5 to 9, as follow:

Once details of the transfer are negotiated and the transfer is validated, the file is transferred between the gateway and the file transfer server, preferably across a virtual channel established between service 21 and adapter 23 ~~2314~~. In the preferred embodiment, the file is transferred in chunks using the hypertext transfer protocol (HTTP). If the transfer is interrupted, the transfer can be resumed without re-sending already transferred chunks.
